ONLINE AUTOMATED DATA BACKUP

ESSENTIAL SECURITY FOR YOUR PRACTICE

Keep your practice's information safe and secure with MaxiVault™ data backup software

- Protect your valuable data from unexpected disaster
- Save time with automated backups
- Encrypt and store data off-site for complete peace of mind
- Restore lost or damaged data quickly and easily
- Protect the privacy of confidential data
- Only pay for what you use to minimize cost

Maximum Data Protection

MaxiVault is state-of-the-art software to protect your practice's information from the unexpected. You insure your other assets—your house, your car, your practice's equipment. But how do you replace lost patient data in the event of theft, accidental deletion, server crash, burst sprinkler system, fire, flood or other disaster? The answer is MaxiVault. Its automated data backup to a remote location is like a full coverage insurance policy for your practice's data.

Quick, Easy and Secure

Backup all your practice information—Maxident *and* non-Maxident files—that you cannot afford to lose. Schedule the backups to occur as frequently as you want, at any time you want. It is all automatic, and eliminates human backup error. Protect your practice data with minimal time and effort, so you can spend more time with your patients.

Fast Disaster Recovery

Use MaxiVault's data restoration capabilities to quickly recover your files in the event of lost data. And, in the case of a disaster that requires you to replace your server and other office computers, you can be up and running again with MaxiVault with minimal disruption to your practice.

Online, Remote, Scheduled, Automated Data Backup

- State-of-the-art, off-site, data centre
 - Six-month file retention period
 - Multiple backup version retention
 - Data encryption and compression
 - Minimal storage requirements
 - Encryption keys
 - 128-bit Twofish encryption algorithm (*block cipher*)
 - IP address access restrictions
 - Backup failure detection and recovery
- Backup Maxident *and* non-Maxident files

+

Privacy and Confidentiality Assured

MaxiVault has cutting-edge technologies to protect the confidentiality of your backup data through encryption, compression, and data access control. It encrypts your backup files before sending them to the data centre. Then, if ever you need to recover your data, you simply decrypt your files using the same key as you used for the encryption. Keep your encryption key safe, and be confident that, with MaxiVault, complete privacy protection of your patient data and other files is assured.

Restricted Access

Plus, MaxiVault restricts access to your backup files to a list of IP addresses that you set. If anyone tries to access your data from a computer with an IP address that is not on your defined list, access to your backups is denied. This provides an additional layer of protection in keeping your practice's information confidential.

Minimum Backup Time

What's more, MaxiVault compresses your encrypted files to shorten the transmission time. It is also smart enough to only backup changes in your data since the previous backup. Therefore, after the initial full backup, all subsequent backups are incremental only, saving both time and any transmission costs. MaxiVault's data compression also minimizes the space your backups require in the data centre to minimize memory storage costs. It also adds an extra layer of privacy protection for your practice's data.

**MAXIVAULT IS
ESSENTIAL SECURITY
FOR YOUR PRACTICE.**

Multiple Backup Versions

Your backups are retained by MaxiVault for six months before they are automatically purged from the data centre. Retrieve any version of backup you want during its retention period. This is invaluable if you discover a data corruption that occurred prior to the last backup. Simply go back to an older backup version that is known to be good and pre-dates the corruption.

Backup Failure

If ever your backup fails for any reason, such as a lost internet connection in the middle of the backup transmission, MaxiVault alerts you and Maxident Support immediately of the failed backup. Maxident Support then takes corrective measures.

Why MaxiVault?

Your practice's data is one of your most valuable assets. Moreover, your patients trust you to protect their information. Consider the consequences, therefore, if you lose your data. Now imagine the peace of mind you gain in knowing your data is safely backed up in a state-of-the-art data centre. MaxiVault makes this a reality. It is a high-tech, automated, secure, data backup system that protects your data, its privacy, and its confidentiality. An integral component of the Maxident software suite, MaxiVault is essential security for your practice.
