STATE-OF-THE-ART CHARTING

powerful productivity boosting

Replace your paper charts with ease using MaxiChart™ electronic charting software

- Eliminate charting errors
- Increase the speed and accuracy of charting
- Assure your notes are correct and always complete
- Streamline your entire dental practice
- Automate patient communications with ease
- Improve patient health
- Increase your productivity in just a few clicks

Innovative, Intelligent and Powerful

MaxiChart is state-of-the-art software to create, update and maintain your patient charts like never before. MaxiChart's advanced charting, note taking, and treatment planning improve chart accuracy. And the access to patient information that it provides means your office administrators can book your appointment calendar for months in advance, identify patients with expiring unused insurance, and fill empty slots with patients needing treatment... to boost your productivity and income.

Treatment Planning and Patient Consent

Create and manage patient treatment plans and plan priorities with MaxiChart. Then, print a multi-option treatment plan that the patient can take home. Obtaining informed consent is far easier than ever before. You can also capture patient signatures electronically to store patient treatment consents on file for your records. A critical component of Maxident's *Never-Lose-a-Patient™* Recall and Appointment System and *Never-Lose-A-Treatment Plan™* System, MaxiChart is key to ensuring optimal patient health and satisfaction.

Revolutionary Artificial Intelligence

MaxiChart has exclusive artificial intelligence technology that learns the dentistry you do. It adapts itself to your style of dentistry and workflow to improve productivity and data accuracy. What's more, it learns the correct procedure codes for your practice. This means your staff no longer needs to know codes. Each treatment is captured and automatically sent to the front of office for a quick and accurate patient check-out, insurance claim submission, and payment.

RESTORATIVE AND PERIODONTAL ELECTRONIC CHARTING SOFTWARE

Point, Click, Talk or Touch Charting

MaxiChart makes charting quick and easy with these features:

- Touch screen and tablet design
- Voice activation
- Geometric and anatomical views
- Customizable screen colours and graphics
- Customizable periodontal charting
- Optional use of a hands-free Dental RAT for full infection control during perio charting
- Custom and predefined chart noting capability
- Ability to save progress notes now or commit them later
- Automatic notification if patient chart notes are not completed by end of day

User Friendly

Fun and easy-to-use tablet and touch screen design improve data input efficiency and chart accuracy. These cutting edge technologies also make charting portable, giving you the freedom to move about the office for diagnosis, treatment, and convenient patient consultation.

Voice Commands and Progress Note Dictation

Voice activation allows you to update a patient's chart completely hands-free even while you are treating the patient — no need to use a keyboard; no need to remove your gloves; no contamination of the sterile environment while you update your charts.

High Quality Digital Images

Save digital images per tooth, compare images, and view previous treatment history graphically in the odontogram. This is invaluable for before, during, and after treatment comparative analyses. What's more, the ability to record the number of restorations per tooth means

you can also easily see progressions and regressions graphically, instantly, with just the click of a mouse.

Patient Information at Your Fingertips

Quickly find patients with treatment plans, approvals, or consents on file. Track patients that have periodontal pockets deeper than the value 'X'... you enter 'X', and MaxiChart will tell you which patients need oral health help. Instant access to patient information means more appointment bookings to boost your income.

Small and Large Practices

MaxiChart works in single and multiple location practices. Its advanced networking capabilities mean anyone with authorized access can instantly see a patient's chart and images from any workstation on your network. Administrative staff can quickly verify treatment during patient check-out. And you can easily consult with colleagues and specialists in your practice on diagnoses and treatment planning.

MaxiChart can also work stand-alone in a mobile practice for treating patients, for example, in personal care homes.

Going Paperless

Planning to go paperless, but not sure how? MaxiChart's electronic charting and digital imaging capabilities are critical elements in reducing paper and essential components in your step-by-step plan to go paperless.

Why MaxiChart?

MaxiChart's revolutionary artificial intelligence, cutting-edge technologies, innovation, and robustness offer unparalleled features and benefits. Its technologies allow you to keep current with the technological advances that patients have grown to expect. Its voice commands mean you can simply talk to your computer to update your patient charts. And its support for digital imaging means you can reduce paper or even go paperless. In a nutshell, MaxiChart is a high performance electronic charting solution for dental practices, large and small.
